

## TRIPLE BLACK WATER

For freshwater

### New formula.

The enhanced formula of **TRIPLE BLACK WATER** has a concentration level three times higher than the previous formula. It contains natural extracts such as humic acid, tannins, trace elements, vitamins, fulvic acid, etc. Additionally, it is rich in peat essence and almond leaf extract. It instantly converts tap water into "black water" similar to that found in the Amazon River.

### Natural extracts and triple concentration of ingredients.

- 1.- Effectively reduces fish stress and intensifies their coloration.
- 2.- Inhibits the development of pathogens, notably strengthens the immune system, and increases resistance to diseases.

### 100% natural, replicates the most natural environment possible.

- 1.- Replicates the blackwater environment very naturally in the aquarium.
- 2.- Promotes the reproduction of species such as Discus fish and dwarf cichlids, significantly increasing the survival rate of offspring. It also protects fertilized eggs from fungal infections.
- 3.- Supports the development of aquatic plants and reduces algae growth rates.
- 4.- Moderately reduces water hardness (dKH) through a mild acid reaction process.
- 5.- Decreases pH value through the same moderate acid reaction process.

### Highly concentrated.

Its formula is optimized to achieve high concentration and excellent performance:  
**1ml of product treats 10 liters of water in your aquarium.**

### FEATURES:

- 1.- Specially formulated for the care and maintenance of tropical fish to recreate a natural Amazonian blackwater environment as closely as possible.
- 2.- New formula three times more concentrated in natural extracts: Humic acid, tannins, trace elements, vitamins, fulvic acids, etc. It is also rich in almond leaf extract.
- 3.- Simulates the water quality of Amazonian blackwater environments, which significantly reduces stress and facilitates rapid adaptation of fish to their environment, as well as promoting rich natural coloration.
- 4.- Its formula provides natural antibiotic properties to the water, significantly reducing the risk of bacterial and fungal infections.
- 5.- Its highly concentrated composition promotes the reproduction of species such as Discus fish and dwarf cichlids, significantly increasing the survival rate of their offspring.
- 6.- Protects fertilized egg spawns from vulnerability to fungal infections.
- 7.- Significantly reduces the growth and reproductive rates of algae.

### Main components:

Citric acid, Humic acid, Tropical almond leaf extract (*Terminalia Catappa*), Distilled water
