

## VITAMINS

For freshwater

### FORMULA:

Contains a large amount of vitamins B1, B<sub>2</sub>, B<sub>6</sub>, A, D, and E, as well as other supplements and coenzymes very useful as a dietary supplement for aquarium fish in closed systems. Effectively prevents pathologies related to long-term feeding with a single type of food. Makes fish metabolism more efficient, facilitates their adaptation to changes in their environment, and strengthens their immune system against pathogens. Improves the success rate in fish reproduction. In summary, **VITAMINS** is an ideal supplement for the daily feeding of ornamental fish.

### Highly concentrated.

Its formula is optimized to achieve high concentration and excellent performance:

**1ml of product treats 10 liters of water in your aquarium.**

### FEATURES:

- 1.- Specially formulated to meet the nutritional needs of freshwater tropical fish.
- 2.- Rich in vitamins B1, B2, B6, A, D, and E, as well as other nutrients such as amino acids and coenzymes. Provides a wide range of essential nutrients that significantly strengthen the immune system of fish and quickly restore their health and vitality. This promotes healthy growth, developing well-proportioned bodies and vibrant colors in fish.
- 3.- Its nutrient-rich formula improves the metabolism of fish and their ability to resist diseases. It also enhances their ability to adapt to new environments, improving the hatching rate of eggs and the survival of fry.
- 4.- Can be used both during and after illnesses in fish. Helps increase the survival rate of affected specimens and significantly reduces the recovery time.

### Main Components:

Multivitamins, Glucan, Vitamin B<sub>2</sub>, Sodium Citrate, Potassium Sorbate, Distilled Water
